Software Engineer specializing in software design and development, with hands-on experience as a Full-Stack Developer involved in the full product lifecycle. Solid proficiency in Java, C++, C#, .NET Framework, React.js, Bootstrap, Docker, and Git. Proven track record of applying design patterns, clean code principles, and Agile methodologies. Looking to bring value as a Software Developer by building robust and scalable solutions.

PROFESSIONAL EXPERIENCE

Cordoware, IT Consulting C# .NET Framework MVC SQL Server Bootstrap JavaScript/jQuery	Full-Stack Developer February 2026 - July 2026
• Collaborated across the full software development lifecycle (SDLC) within cross-functional Agile teams, utilizing Git and SourceTree for version control. • Engineered and deployed full-stack modules for an enterprise CRM and refactored legacy codebases to maintain business logic integrity. • Designed relational database schemas using a Code-First development approach.	

ACADEMIC PROJECTS

Mathle (Full-Stack Web Game) Java (Servlets, JSP) MVC Architecture JavaScript MariaDB	Web Engineering March 2025 - May 2025
• Engineered a full-stack Java web application following a strict MVC architecture to decouple business logic from the presentation layer, delivering features iteratively under Scrum. • Built a Java Servlets backend to handle HTTP requests and implemented the DAO/DTO patterns with JDBC for data persistence in MariaDB. • Implemented a secure, end-to-end authentication system, safeguarding user credentials via password hashing with jBCrypt. • Developed an interactive UI using JSP, CSS, and vanilla JavaScript (DOM manipulation) for real-time gameplay management, leaderboards, and custom themes.	
MoodNest Java Spring Boot React.js REST API MongoDB (NoSQL) Docker	Bachelor's Thesis March 2026 - June 2026
• Architected and developed an end-to-end Full-Stack Single Page Application (SPA) designed for daily personal mood tracking and analytics. • Engineered a RESTful backend using Java and Spring Boot to manage core business logic, application security, and data access layers. • <i>Built a responsive, dynamic UI with React.js, integrating Chart.js for data visualization and trends tracking.</i> • Integrated MongoDB for flexible NoSQL data persistence of mood logs and metrics. • Containerized the application using Docker, standardizing development environments and ensuring seamless, consistent deployments.	

EDUCATION

Higher Polytechnic School of Córdoba, University of Córdoba Bachelor's Degree in Computer Engineering (Major in Software Engineering)	Córdoba, Spain September 2022 - June 2026
